

SPATIAL SCANNING DURING FIELD ARCHAEOLOGICAL RESEARCH IN ABUSIR (EGYPT) BY TECHNOLOGY FARO FREESTYLE3D

PROSTOROVÉ SKENOVÁNÍ PŘI TERÉNNÍM ARCHEOLOGICKÉM VÝZKUMU V ABUSÍRU (EGYPT) TECHNOLOGII FARO FREESTYLE3D

| | |
|---|---|
| Range | 0.5 – 3 m |
| Resolution @ 0.5m | Lateral: 0.2 mm - 1mm Depth: 0.2 mm |
| 3D point accuracy/whole scan accuracy** | < 1.5 mm |
| Typical lateral accuracy*** | < 1 mm |
| Single image point density | Up to 45,000 points/m ² in 0.5 m distance Up to 10,500 points/m ² in 1m distance |
| Recorded 3D points**** | Up to 88,000 points/s, point cloud density increases with time |
| Typical Noise (rms) | 0,7 mm @ 0,5 m distance, 0,75 mm @ 1m distance 2,5 mm @ 2 m distance 5 mm @ 3 m distance |
| Eye safety | Class 1 laser |
| Lighting conditions***** | Up to 10,000 Lux |
| Light source | In build LED flash |
| Scan volume | 8.1m ³ |
| Typical field of view (H x W) | 450 mm x 530 mm @ 0.5 m 930 mm x 1,100 mm @ 1m 1,800 mm x 2,000 mm @ 2 m 2,600 mm x 2,900 mm @ 3 m |
| Typical angular field of view (H x W) | 45° x 56° @ 0.5 m 45° x 59° @ 1m 49° x 54° @ 2 m 49° x 52° @ 3 m |
| Exposure time | 0.02 ms – 10 ms (autoexposure) |
| Texture color | 24 bit |
| Dimensions | 260 mm x 310 mm x 105 mm |
| Connectivity | USB 3.0 |
| Weight | 0.98 Kg |
| Power supply | 5W, USB 3.0-powered |
| IP rating | IP 5X |
| Calibration | Optional in-field user calibration with supplied calibration plate |
| Operating temperature range | 0 – 40° C |
| Operating humidity range | Non-condensing |

* Worldwide service and support from local FARO facilities

** Measured on a 1m reference scale, in 1m distance, for a lateral scanner movement & 1m using targets for distance measurement

*** Measured in 0.5m-3m distance

**** Point density depends on scanned surface and lighting conditions

***** Limited range and point density in sunlight

Recommended System Requirements for Tablet

Microsoft Windows 8.1 pro, 64-Bit 4th generation Intel® Core™

i5 256GB hard disc with 8GB RAM MicroSDXC

Microsoft® Surface Pro 2 or 3 is a recommended device

When carrying out archaeological excavations are commonly used basic geodetic and photogrammetric methods. Stationary ground 3D laser scanning has also found its place in special documentation methods. Pouster represents the first use of hand-held laser scanner FARO Freestyle3D in terms of the field of archaeological research in Abusir (Egypt). Noncontact 3D data collection was used during May 2015 at the documentation of selected objects.

The authors tested this technology and bring real advantages and disadvantages of using this technology. Pouster present the 3D data and show 3D models from this technology. Technology in the harsh conditions of high temperatures, dust, sand and intense light proved.

Při provádění archeologického výzkumu se standardně používají základní geodetické metody a fotogrammetrie. Stacionární pozemní 3D laserové skenování také nášlo své místo ve speciálních dokumentačních metodách. Pouster představuje první využití ručního laserového skeneru FARO Freestyle3D v podmírkách terénního archeologického výzkumu v Abusíru (Egypt). Bezkontaktní sběr 3D dat byl použit v průběhu května 2015 při dokumentaci vybraných objektů.

Autoři testovali tuto technologii a přinášejí reálná pozitiva a negativa při využití této technologie. Prezentují získaná data a ukázky vytvořených 3D modelů. Technologie se v tvrdých podmírkách vysokých teplot, prachu, píska a intenzivního světla osvědčila.
